RavenDB

The Boring Database

The high-performance multi-model database built for real-time access, high throughput, and seamless scalability.

Simplify your database management with automatic indexing, intelligent query optimization, and distributed clustering, ensuring low-latency performance, high availability, and near-zero downtime across on-premise, cloud, and hybrid environments.

RavenDB 7.0 adds Vector Search with AI, integrating with OpenAI, Azure OpenAI, Ollama, and Google AI for advanced semantic search and Retrieval-Augmented Generation (RAG) for LLMs.

Faster Queries, Lower Costs – RavenDB Thinks for You.

Capabilities

- Automatic Indexes
- Fully ACID
- Full-Text Search
- Continuous Availability
- Secured by Default
- Vector Search
- JSON
- Aggregate in Less Than 1ms

V7.0 Now with Native AI-Integration
